

FACT SHEET

Zurn Wilkins Backflow Preventers and Valves

The Zurn Wilkins Difference

Backflow Preventers

From simplified, proven designs to time-tested durability, Zurn is the preferred manufacturer of backflow preventers. The compact dimensions allow contractors to replace or install within any application. The robust construction and economic repair kits keeps labor, costs and maintenance to a minimum for owners.

Automatic Control Valves

Valve designs simplify maintenance and repair, while standard valve features enhance total cost of ownership. The 48-hour lead times speeds delivery and maximizes uptime in most instances, and equivalent lay lengths to leading manufacturers mean ease of retrofit.

Thermostatic Mixing Valves

Zurn Wilkins thermostatic mixing valves protect users from scalding injuries while maintaining efficient temperatures to inhibit the growth of bacteria.

Pressure Release Valves

Protecting sensitive equipment from over-pressurizing and high temperatures is accomplished with relief valves. Zurn Wilkins pressure and temperature, and pressure relief valves are the perfect choice against excessive line pressure and high temperatures.
