

Genuine Elkay filters are rated for 3,000 gallons, which is about 19,200 20-ounce bottles. Filter life depends on water conditions and usage; we recommend changing your filter 1-2 times per year to keep your filter light green.

Look for the Lights:

- 1** Green LED: Your filter is **working**.
- 2** Yellow LED: Your filter should be **changed**.
- 3** Red LED: Filter has reached end of life and **may no longer be effective**.

Important Tips and Tricks for Elkay Filter Changes:

- Turn your used filter 1/4 turn clockwise to remove from unit. When installing your new filter, you will turn 1/4 counterclockwise to secure it.
- On enhanced models, the filter status light will automatically reset once your new filter is properly installed. If your green light has not reset automatically, view our **troubleshooting video**. There is often a simple fix to this problem.
